# Smart Cultivation Watering System

---

Team member: Cheah Wen Xian, Lee Ting Le, Lim En Xi, Mikael Koay

---

# Overview of the system

## Concept

Using modern IOT devices to effectively manage and monitor plant irrigation in a cultivation environment

## Goals

Create a healthier cultivation and planting environment

## Sensors

1. Soil moisture sensor
2. Temperature sensor
3. Humidity sensor
4. Rain sensor
5. Camera sensor (optional)

## Actuators

1. Water valve
2. Pump
3. LCD Display
4. LED
5. Relay
6. Camera from mobile app (optional)

## Programming Lang.

Python 3.10 using Thonny IDE

## Database

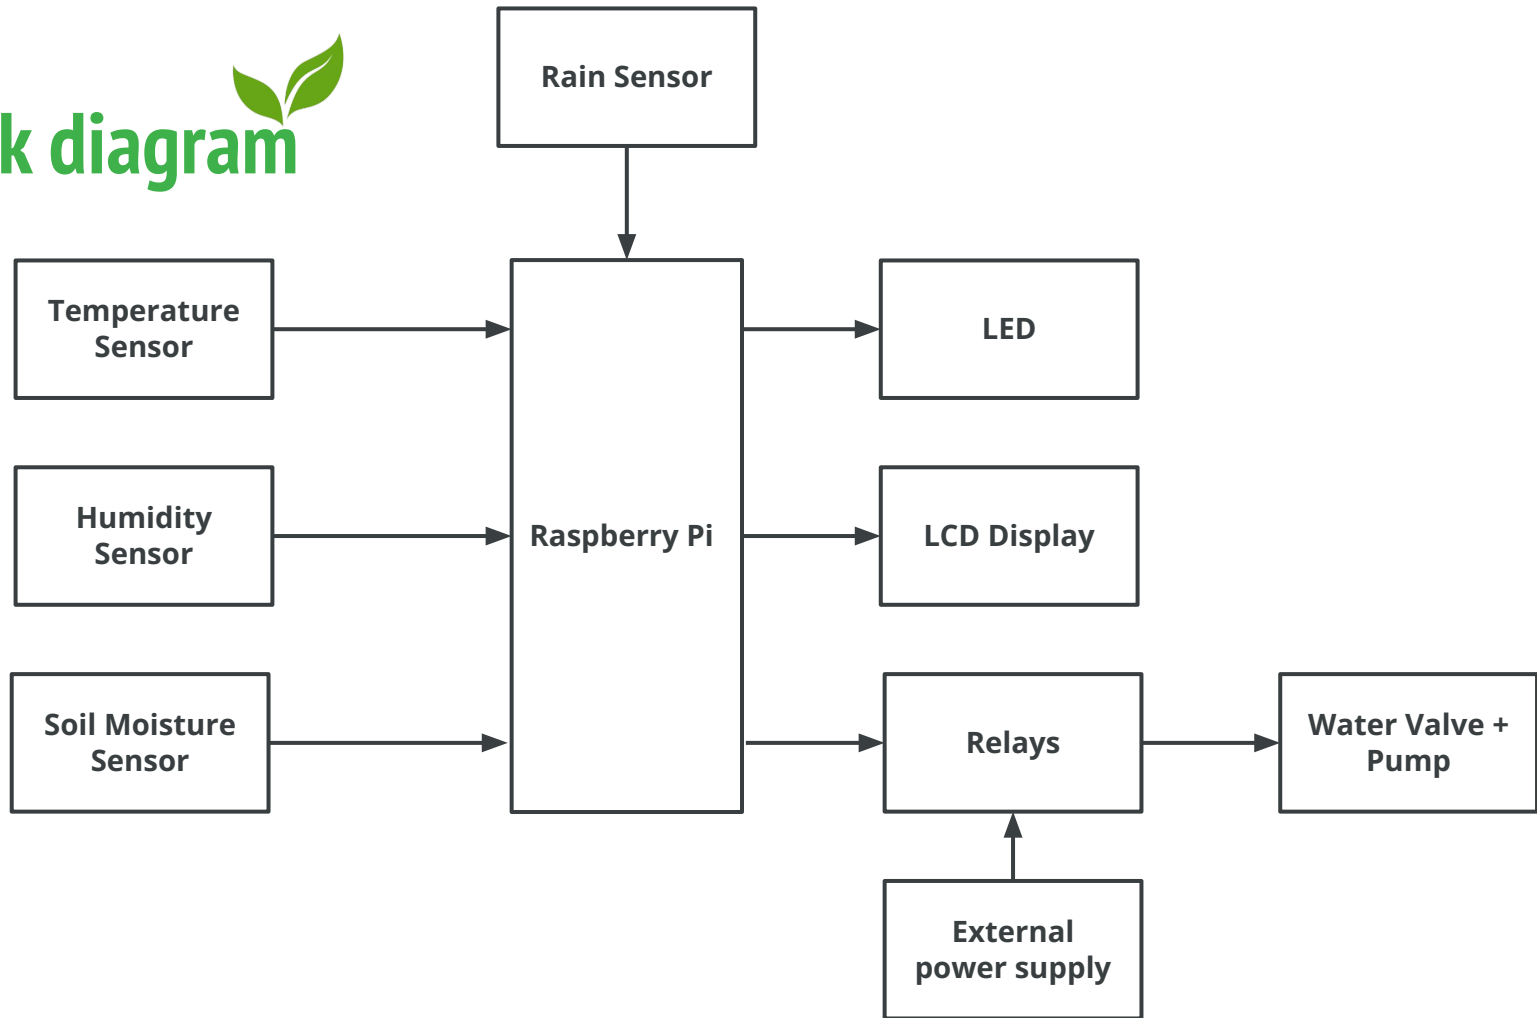

Firebase

# Target User

- Smart-scale farmers and hobbyists
- Urban gardeners

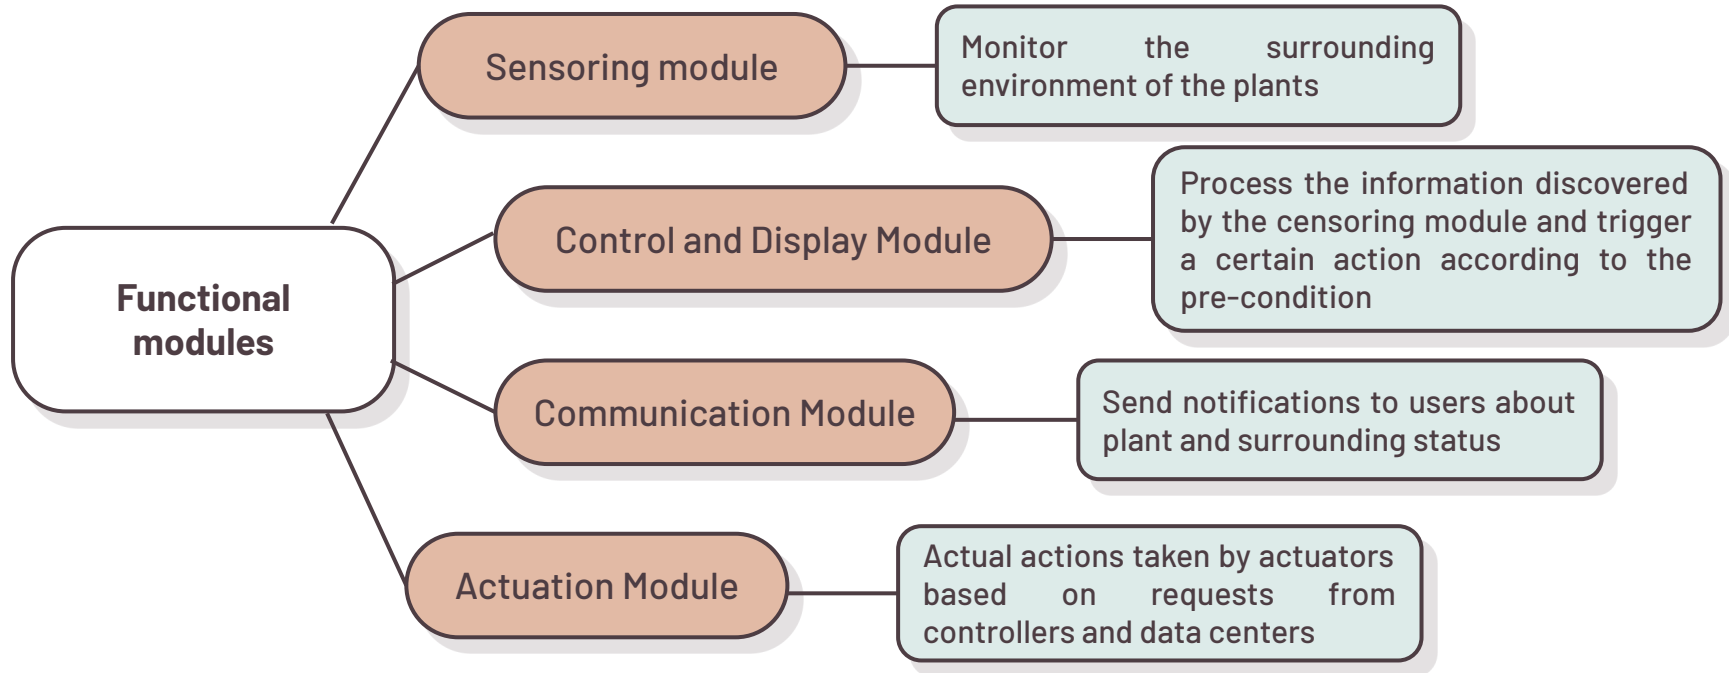

# Block diagram

# Example pictures

# Functional Modules

**Thank  
You!**

## Question To Ask...

1. If humidity and temperature sensors combined into a single device, are they consider two sensors?
2. Proposed project OK tak? Comment abt la lengzai
